PROFESSIONAL SUMMARY

Backend Software Engineer with 2+ years of experience building and maintaining scalable backend systems using TypeScript, Node.js, and SQL/NoSQL databases. Experienced in secure API development, backend optimization, and delivering reliable services for real-world products. Focused on clean code, sound architecture, and continuous technical growth.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), SQL, NoSQL

Backend: Node.js, Express.js, REST API Design, Backend Architecture

Databases: MongoDB, MySQL, PostgreSQL, Redis, Prisma ORM

DevOps & Tools: Docker, GitHub Actions (CI/CD), Git, Postman

Testing: Unit Testing, Integration Testing (Jest, Supertest)

Security: JWT, OAuth, RBAC, Rate Limiting, OWASP Security Practices

Core Engineering Skills: API Design, Debugging, Performance Optimization, Software Documentation, Team Collaboration

PROFESSIONAL EXPERIENCE

ScholarGuide Tech

Sep 2025 – Present

Remote Backend Software Engineer

- Built and maintained core backend services using Node.js and TypeScript, supporting real-world learning and content workflows.
- Designed and enforced role-based access control (RBAC) to ensure secure and consistent data access across the platform.
- Improved API performance and responsiveness through query optimization and backend tuning, supporting reliable usage at scale.
- Optimized MongoDB aggregation pipelines, reducing CPU usage by 40% and accelerating analytics and reporting features.

Epic Global Ltd

Jul 2025 – Dec 2025

Backend Software Engineer (Contract)

- Engineered and maintained backend services for an HR management platform using TypeScript and Node.js, supporting core workflows such as employee records, payroll, recruitment, and performance tracking.
- Designed and implemented RESTful APIs and role-based access controls to manage organizational structures (divisions, departments, units) and enforce secure data access.
- Modeled relational data and implemented persistence logic using SQL databases and ORM tools, ensuring data integrity for sensitive employee and payroll information.
- Implemented complex business rules and validations for HR processes, including date-based filtering,

eligibility checks, and lifecycle constraints, improving system reliability and accuracy.

- Collaborated with cross-functional teammates to review requirements, test features, debug issues, and deliver stable backend functionality in a remote contract environment.

Dala Innovation

Mar 2025 – Aug 2025

Remote Backend Developer (Contract)

- Developed secure backend access controls for the DalaCare App, safeguarding sensitive medical user data.
- Implemented JWT/OAuth authentication flows and middleware-based authorization, ensuring reliable and secure access.
- Applied core software security principles to mitigate vulnerabilities and enhance system integrity.
- Collaborated remotely with engineers to test, debug, and document authentication workflows, improving maintainability and knowledge sharing.

InternPulse

Sep 2024 – Feb 2025

Backend Developer (Internship)

- Developed and maintained backend services using Node.js and JavaScript, supporting high-volume financial operations.
- Integrated third-party payment APIs to improve transaction reliability and reduce failures.
- Implemented API logic for concurrent requests and real-time validations, ensuring system stability under load.
- Wrote and maintained unit and integration tests, enhancing code quality and reliability within an Agile team.

EDUCATION

Bachelor of Technology (BTech) in Physics

2019 – 2025

Federal University of Technology, Minna Niger State

PROJECTS

Intelligent Productivity & Life-Management System

- Developed a full-stack system using TypeScript, Node.js, React.js, and MySQL to help users plan realistically and avoid over-commitment.
- Designed streak tracking and progress-momentum features that increased user consistency and goal completion rates.
- Built a real-time task engine and responsive UI, boosting productivity and reducing task overload.

Node.js Payment Service

- Developed a RESTful payment-processing API using Node.js and Express to parse and execute financial instructions based on defined syntax and business rules.
- Structured the system using a custom Express server abstraction, ensuring clean separation

of concerns and consistent execution across services.

- Delivered a reliable rule-driven engine capable of validating, interpreting, and processing transaction commands with high accuracy.

Heuristic Engine API

- Built a backend service that detects phishing threats across URLs, emails, and QR codes using rule-based analysis.
- Designed a scoring system that evaluates risk levels and explains why resources are flagged, improving interpretability and trust.
- Applied analytical reasoning to translate real-world security patterns into executable rules for automated threat detection.
