

AROWOSERE ABDULKHABEER AYODEJI

+2348168905506 | arowosere.ak@gmail.com | Lagos, Nigeria

PROFESSIONAL SUMMARY

Backend Software Engineer with 2+ years of experience building secure, high-performance backend systems using TypeScript, Node.js, and Express. Specialized in designing resilient REST APIs, optimizing database performance, and implementing robust authentication and access control mechanisms for production systems. Proven ability to improve system efficiency and reliability, including reducing backend processing overhead by 40% through query and architecture optimization. Strong collaborator with experience working across product, frontend, and QA teams to deliver scalable, fault-tolerant services.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), SQL, NoSQL
Backend: Node.js, Express.js, REST API Design, Backend Architecture
Databases: MongoDB, MySQL, PostgreSQL, Redis, Prisma ORM
DevOps & Tools: Docker, GitHub Actions (CI/CD), Git, Postman
Testing: Unit Testing, Integration Testing (Jest, Supertest)
Security: JWT, OAuth, RBAC, Rate Limiting, OWASP Security Practices
Frontend (Working Knowledge): HTML5, CSS3, Responsive Layouts, React.js
Core Engineering Skills: Performance Optimization, Debugging, Asynchronous Programming, System Design, Cross-functional Collaboration

PROFESSIONAL EXPERIENCE

- ScholarGuide Tech

Sep 2025 – Present

Remote Backend Software Engineer

 - Designed and developed scalable backend services and REST APIs using TypeScript, Node.js, and Express, supporting core learning workflows and handling consistent user activity across the platform.
 - Implemented Redis-based caching for authentication tokens and high-traffic endpoints (frequently accessed user and course data), reducing repeated database queries by an estimated 25–35% and improving API response times.
 - Optimized database queries and aggregation pipelines, reducing CPU usage by 40% and improving endpoint performance under increased load.
 - Structured backend services into modular components, reducing code complexity and improving feature delivery speed by ~20%.
 - Diagnosed and resolved production performance bottlenecks, reducing average response latency and improving overall system stability.
 -
- Dala Innovation

Jul 2025 – Dec 2025

Remote Backend Developer (Contract)

 - Built and secured backend services for a healthcare application, ensuring safe handling of sensitive

patient and user data.

- Designed and implemented authentication and authorization systems using JWT and OAuth, enforcing strict access control across multiple user roles.
- Applied backend security best practices (input validation, access restrictions, and data protection) to reduce risk of data exposure and strengthen system integrity.
- Developed and maintained RESTful APIs using Node.js and Express, enabling reliable communication between frontend and backend systems.
- Collaborated with engineers and QA to troubleshoot issues, test authentication flows, and improve system stability and reliability.
- Documented API endpoints and authentication workflows, improving maintainability and onboarding efficiency.

Crude City Global

Mar 2025 – Aug 2025

Backend Software Engineer (Contract)

- Engineered backend services for an HR management platform using TypeScript and Node.js, supporting core workflows such as employee records, payroll, recruitment, and performance tracking.
- Designed and implemented RESTful APIs and relational data models, ensuring data integrity and efficient query performance.
- Built and enforced role-based access control (RBAC) systems to manage organizational hierarchies and secure sensitive employee data.
- Modeled relational data and implemented persistence logic using SQL databases and ORM tools, ensuring data integrity for sensitive employee and payroll information.
- Implemented complex business rules and validations for HR processes, including date-based filtering, eligibility checks, and lifecycle constraints, improving system reliability and accuracy.

EDUCATION

Bachelor of Technology (BTech) in Physics

2019 – 2025

Federal University of Technology, Minna Niger State

PROJECTS

Intelligent Productivity & Life-Management System

- Built a full-stack application using TypeScript, Node.js, Express, React, and MySQL to manage user productivity and planning.
- Designed backend APIs and relational data models to support real-time task tracking and analytics.
- Implemented performance optimizations and efficient query handling to improve system responsiveness.

Node.js Payment Service

- Developed a RESTful payment-processing API using Node.js and Express to parse and execute financial instructions based on defined syntax and business rules.

- Structured the system using a custom Express server abstraction, ensuring clean separation of concerns and consistent execution across services.
- Delivered a reliable rule-driven engine capable of validating, interpreting, and processing transaction commands with high accuracy.
